This is a long-transcript enriched cDNA library (Ref.
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). ES
cells were plated at density 3x104/cm2, on gelatin-coated
plates and cultured for 48 hrs at 37 OC, $$ CO2. Culture
medium: DNEM supplemented with 15* FBS, 2 mM L-glutamine,
0.1 mM NEAA, lmM Sodium pyruvate, 0.1 mM
beta-mercaptoethanol, 100 U/ml penicillin, and 100 ug/ml
streptomycin. Double-stranded cDNAs were synthesized with
an Oligo (AT) primer [Invitrogen:
Synthesized with 15% trom

ö
Ex Tag polymerase (Takara) with a primer Sal4-S. The products were purified by phenol/chloroform and Centricon 100. The cDNAS were digested with SalI and NotI enzymes and cloned into SalI/NotI site of pCMV-SPORTE plasmid vector. The DH10B E. coli host was transformed with the lightion mixture by the standard chemical method. The average insert size is about 3.4 kb. The library was constructed by Yulan Piao."

```
tumor necrosis factor receptor 1 precursor [validated] - human
N/Alternate names: P55 tumor necrosis factor receptor; TNF receptor type 1
N/Contains: tumor necrosis factor alpha inhibitor; tumor necrosis factor binding protein
                                                                                                                                                                Cispecies: Home sapiens (man)

C;Comment: This receptor is found on sensory and sympathetic neurons, on neuroblastoms or C;Comment: The cysteine-rich region of the extracellular domain may form part or all of a C;Comment: This protein is thought to form a high-affinity receptor when it associates w. C;Comment: This receptor undergoes both N- and O-linked glycosylation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A; Map position: 17q21-17q22
C; Superfamily: nerve growth factor receptor; NGF receptor repeat homology
C; Superfamily: nerve growth factor receptor; MGF receptor repeat homology
C; Keywords: duplication; glycoprotein, predicted <81G>

C;Comment: This receptor, a member of the tumor necrosis factor re
tresia, activates a cell death and/or survival signaling cascade.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  apopiosis-mediating surface antigen Fas precursor - human N;Alternate names: surface antigen APO-1 C;Species: Homo sapiens (man)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                A; Cross-references: EMBL: X63717; NID: 928741; PID: 928742

ISSUE SPECIFICITY: Ubiquitous.
SIMILARITY: Contains 3 TNFR-Cys repeats.
CAUTION: Ref.1 (CAC27353) sequence differs from that shown due to
erroneous gane model prediction.
CAUTION: Ref.1 (CAC16406) sequence differs from that shown due to
a frameshift in position 38.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          apoptosis. Protects cells against TRAIL mediated apoptosis possibly through ligand competition. Cannot induce the NF-kappa-B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Receptor for the cytotoxic ligand TNFSF10/TRAIL. Lacks cytoplasmic death domain and hence is not capable of inducing

(AMGE-) AMGEN INC.

Saris C;

WPI; 2003-874309/81. N-PSDB; AAD64755 New tmst2 nucleic acid molecule and polypeptide, useful for diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 expression, e.g. sepsis, inflammation or cancer, or for chromosome mapping

Claim 1; SEQ ID NO 10; Opp; English.

The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TNF) receptor super gene family and polynucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome

(AMGE-) AMGEN INC.

Saris C;

WPI; 2003-874309/81. N-PSDB; AAD64754. New tmst2 nucleic acid molecule and polypeptide, useful for diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 expression, e.g. sepsis, inflammation or cancer, or for chromosome mapping

Claim 1; SEQ ID NO 8; Opp; English.

The invention relates to transmembrane decoy-receptor (tmst2) proteins and their secreted splice variants, belonging to the tumour necrosis factor (TMF) receptor super gene family and polymucleotides encoding such proteins. The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The

The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome identification or mapping. The invention is useful in gene therapy. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               cachexia; autoimmune disease; inflammatory disease; chromosome mapping; cancer; chromosome identification; gene therapy; antibacterial; virucide; immunosuppressive; immunomodulator; antiinflammatory; antiparasitic; cytostatic; mouse; human; immunoglobulin Fc region; fusion protein.

```

The invention relates to a tmst2-receptor polypeptides and the polymuclectide encoding them. The sequences of the invention are useful for treating diseases and conditions including acquired immunodeficiency syndrome (AIDS), anaemia, and diseases, cachexia, cancer, cerebral malaria, diabetes mellitus, disseminated intravascular coagulation,

mālaria, diabetes mellitus, disseminated intravascular coagulatiou, haemorrhagic shock, hepatitis, insulin resistance, leprosy, leukaemia,

The composition and methods are useful in diagnosing, treating or ameliorating diseases associated with or resulting from abnormal tmst2 and/or abnormal expression of its putative ligand, such as sepsis, cachexia, autoimmune diseases, inflammatory diseases, viral, bacterial and parasitic diseases or cancer. They may also be used for chromosome

The sequences of the invention are used as medication for a number of diseases such as acquired immune deficiency syndrome (AIDS), anaemia, autoimmune diseases,
lymphoma, meningitis, multiple sclerosis, ischaemia, obesity, organ rejection, rheumatoid arthritis, septic shock, stroke, adult respiratory distress syndrome (KADS), tuberculosis and a number of viral diseases. This sequence represents a murine tmst2-receptor polypeptide clone of the

This protein is capable of inducing differentiation in osteoblast cells. The protein may be used to screen compounds for the ability to bind to it, for use as ligands, agoniets or antagoniets and inhibiting or otherwise altering its differentiation inducing activity. Compounds so identified, as well as the protein itself, DNA encoding it, and antibodies to it, may be used in the treatment of diseases of bone growth and osteoblast differentiation, such as bone sarcomas
cachexia, leprosy, leukaemia, hepatitis, multiple sclerosis, myocardial ischaemia, obesity etc. The invention is also useful in gene therapy. The present sequence is mouse ymkz5-human Fc fusion protein.

The invention relates to transmembrane decoy receptor, ymkz5 belonging to tumour necrosis factor (TNF) receptor supergene family and nucleic acid sequences encoding such receptors. The invention is useful for detecting diseases or susceptibility to diseases related to the presence of mutated ymkz5-receptor gene such as tumours or cancers. The sequences of the invention are used as medication for a number of diseases such as acquired immune deficiency syndrome (AIDS), anaemia, auchimune diseases, cachexia, leprosy, leukaemia, hepatitis, multiple sclerosis, myocardial ischaemia, obesity etc. The invention is also useful in gene therapy. The present sequence is mouse ymkz5 receptor protein.

The transgenic animals are a disease model for bone and glycolipid metabolism disorders. Substances identified by the screening method are agents for the prevention and treatment of diseases including osteoporosis, obesity and diabetes. The present sequence represents the modified mouse 7F4 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          116

The present invention relates to a transgenic non-human animal having the expression of 7F4 gene artificially modified. The transgenic animals are a disease model for bone and glycolipid metabolism disorders. Substances identified by the screening method are agents for the prevention and treatment of diseases including osteoporosis, obesity and diabetes. The present sequence represents the modified mouse 7F4 protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                99 ACILCSTCDKDQEMVADCSATSDRKCQCRTGLYYYDPKFPESCRPCTKCPQGIPVLQECN 158

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed sectivity of (II) as useful in gene therapy techniques to restore normal crivity of (II) as useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, formsics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic mino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at (ftp.wipo.int/pub/published_pot_esequences)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to transmembrane decoy receptor, ymkz5 belonging to tumour necrosis factor (TNF) receptor supergene family and nucleic acid sequences encoding such receptors. The invention is useful for detecting diseases or susceptibility to diseases related to the presence of mutated ymkz5-receptor gene such as tumours or cancers. The sequences of the invention are used as medication for a number of diseases such as acquired immune deficiency syndrome (AIDS), anaemia, autoimmune diseases, cachexia, leprosy, leukacmia, hepatitis, multiple sclerosis, myocardial ischaemia, obesity etc. The invention is also useful in gene therapy. The present sequence is mouse ymkz5 receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    57 TFVKAPCKIPHTQGQCEKCHPGTPTGKDNGLHDCELCSTCDKDQNMVADCSATSDRKCEC 116
